

Consultation

Contact

Start with your needs. Build the right mix.

Tell us your models, expected usage, use case, or compute needs. We will recommend the right resource and delivery mix.

What aggregation changes

01 One access point

Reduce platform switching and repeated integration work.

02 Flexible sourcing

Support trials, projects, and long-term demand.

03 Visible usage

Track usage and compare options with clarity.

04 Ongoing support

Support from consultation through deployment.

Models, tokens, and compute through one service.

Services & Use Cases

Services and scenarios

From resources to results

From token access and procurement to compute deployment for research, development, business services, and project delivery.

01 Token Hub

Access leading models and choose by capability, speed, and cost.

02 Token Supply

Flexible supply by usage, term, or project.

03 GPU Rental

GPU instances and dedicated resources.

04 Hardware

Workstations, servers, and cluster solutions.

Typical use cases

Research & Analytics

Software & Integration

AI apps, knowledge bases, code generation, and automation.

Business Operations

Customer service, content, marketing, office work, and insights.

Customer scenarios

Government

Smart services

Universities

Research analysis

Enterprises

Automation

Institutes

Compute platform

AI RESOURCE AGGREGATION

AI RESOURCE AGGREGATION

Models | Tokens | Compute

One access point for leading global AI models and high-performance computing resources.

From selection to deployment

Flexible sourcing / Unified access / Ongoing support

01

Core Advantages

Why choose aggregation

Simpler resource choices

Choose with flexibility, transparency, and ongoing support instead of being locked into one model or resource type.

01 Unified access

Reduce repeated integration work.

02 On-demand mix

Combine models and compute flexibly.

03 Flexible sourcing

Fit trials and project timelines.

04 Usage visibility

Make budgeting and comparison easier.

05 Use-case matching

Balance capability, speed, and cost.

06 Elastic compute

Handle peaks and phased workloads.

07 Full-stack delivery

Cover APIs, servers, and clusters.

08 Technical support

Support from consultation through deployment.

One resource journey

Scope needs > Match resources > Connect > Deploy

02

Tokens & Models

Token and model service

More Models. One Access.

Compare and switch models for the same workload.

Token service journey

Best-fit scenarios

Representative model providers

Models, versions, and availability are subject to the current service catalog.

General AI Reasoning Multimodal Agents

03

Compute & Delivery

Compute and delivery

Compute when you need it

Combine cloud instances and dedicated servers to match workload scale.

Resource options

Workloads and delivery support
