

YIXINGYUN • 2026 PRODUCT MANUAL

Make AI agents Actually get work done

For research, government and enterprise customers, we provide services from discovery and knowledge engineering to workflow system integration, private deployment and continuous operation

Business-aware

Deployable

Measurable

10 mainstream AI agents

Across R&D, workplace, service and operations

One entry point for knowledge, models and business systems

10

AI Agents

5

Deployment Modes

4

Service Tiers

1

End-to-end Team

Powerful AI Agent Capabilities

Move from answering questions to completing work by connecting models, knowledge, tools and human review.

Context-aware

Designed around real roles, workflows and acceptance goals, not generic Q&A.

Configurable

Trusted knowledge

Connect enterprise documents, databases and rule bases with source, version and permission context.

Configurable

Tool execution

Call APIs, web pages, business systems and professional software to turn recommendations into actions.

Configurable

Safe and controlled

Use human handoff, approvals, logs, rollback and private deployment to control risk.

Configurable

How work gets done

1

Understand

2

Retrieve

3

Execute

4

Validate

5

Document

You get an operable way of working, not just a chat window

- Shorter first drafts and summaries
- Consistent knowledge, templates and checks
- Traceable tasks and ownership
- Evidence, logs and human review

Rich AI Agents

Start with one use case and scale to department-level, multi-agent collaboration.

Simulation Engineering Agent

Parameter studies, batch simulation, result summaries and engineering Q&A

AI

SIMULATION COPILOT

Workplace Knowledge Agent

Knowledge Q&A, meeting minutes, task breakdown and document assistance

AI

WORKPLACE KNOWLEDGE AGENT

Tender & Bid Agent

Bid radar, eligibility review, scoring-point analysis and document drafting

AI

TENDER & BID AGENT

Legal & Compliance Agent

Contract review, policy comparison, compliance Q&A and risk registers

AI

LEGAL & COMPLIANCE AGENT

Data Center AIOps Agent

Health checks, alert correlation, root-cause analysis and change approval

AI

DATA CENTER AIOPS AGENT

Customer Service Agent

Pre-sales Q&A, after-sales intake, ticket routing and status queries

AI

CUSTOMER SERVICE AGENT

Sales & Customer Success Agent

Lead research, opportunity follow-up, visit preparation and renewal alerts

AI

SALES & CUSTOMER SUCCESS

Finance & FP&A Agent

Operating dashboards, budget analysis, collections and natural-language BI

AI

FINANCE & FP&A AGENT

Supply Chain & Procurement Agent

Purchase requests, quote comparison, supplier scoring and delivery alerts

AI

SUPPLY CHAIN & PROCUREMENT

HR & Recruiting Agent

Role profiling, resume screening, interview notes and onboarding coordination

AI

HR & RECRUITING AGENT

The portfolio can be combined by industry, system environment and data readiness; final scope follows discovery.

01 / PRODUCT

Simulation Engineering Agent

Turn research, modeling, parameter runs and result review into a reusable engineering workflow.

Core capabilities

- Connect Abaqus, Fluent, STAR-CCM+, MATLAB and SolidWorks toolchains.
- Generate modeling steps, script drafts, parameter tables and run tasks from natural language.
- Read result files and produce trend summaries, anomaly alerts and report drafts.
- Track model versions, parameter sources, run logs and human checkpoints.

Ideal customers

Manufacturing / Automotive / Energy / Materials / R&D

Typical scenarios

Parameter studies, batch simulation, result summaries and engineering Q&A

Verifiable outcomes

• Fewer tool switches

• Higher knowledge reuse

• Traceable results

Suggested acceptance metrics: Task preparation time, script reuse rate and citation completeness. Target values are confirmed against the customer baseline and pilot scope.

02 / PRODUCT

Workplace Knowledge Agent

Find policies, retrieve files, write minutes, prepare reports and start workflows with one request.

Core capabilities

- Search policies, contract templates, meeting minutes and project documents in one place.
- Generate weekly reports, minutes, notices, official documents and presentation outlines.
- Isolate sensitive documents by department, role and project permissions.
- Provide one entry through WeCom, Lark, portals or browser extensions.

Typical scenarios

Knowledge Q&A, meeting minutes, task breakdown and document assistance

Connect existing systems, databases and file repositories

Business outcomes

• Less time finding files

• Consistent policy execution

• Institutional knowledge retained

Ideal customers

Corporate HQ / Administration / HR / Project & R&D Management

Suggested acceptance

Search hit rate, citation coverage and first-draft time

03 / PRODUCT

Tender & Bid Agent

From opportunity screening to first-draft bid documents, identify opportunities faster and reduce omissions.

01

Capability stack

Monitor and filter notices by industry, region, budget and qualification criteria.; Parse eligibility requirements, scoring points, disqualification risks and material lists.

02

Workflow coordination

Generate response matrices, technical proposals, deviation tables and outline drafts.

03

Controls & audit

Reuse historical cases with review, version comparison and collaborative drafting.

● Shorter bid analysis

● Fewer omissions and version errors

● Institutional bidding know-how

Ideal customers Bidders / Tender Agencies / Public Procurement / Group Procurement

Suggested acceptance Analysis time, omission alert rate and version accuracy

Legal & Compliance Agent

LEGAL & COMPLIANCE AGENT

Overview

Core capabilities

Typical scenarios

Acceptance metrics

Accelerate contract review and policy comparison while preserving clause evidence and human decision rights.

Private-ready

Legal & Compliance Agent

ONLINE

Capability modules

01

Extract clauses, grade risks, compare versions and suggest revisions.

02

Answer compliance questions using company policies, regulations and historical cases.

03

Support clause libraries, risk dictionaries, approval workflows and legal review.

04

Provide local deployment, permission controls and audit logs for sensitive files.

Ask

Contract / policy / compliance

Cite evidence

Knowledge base • 8 sources

Recommend

Legal review

● Faster first-pass review

● Consistent review standards

● Lower omission risk

Data Center AIOps Agent

Connect monitoring, alerts, tickets and knowledge to help operations teams close incidents faster.

Ideal customers

Data Centers / Cloud Platforms / IDC / Financial & Large Enterprises IT

Suggested acceptance

Mean triage time, alert compression rate and ticket closure rate

From use case to outcome

Aggregate server, network, storage, virtualization, database and application monitoring.

Correlate alerts, analyze root causes, assess impact and recommend actions.

Generate tickets, inspection reports, change plans and post-incident reviews.

Require approval, two-person review and rollback plans for high-risk actions.

● Shorter alert triage

● Less repetitive troubleshooting

● Auditable operations

06 / PRODUCT

Customer Service Agent

Deliver round-the-clock answers, intake and status updates with human escalation built in.

Core capabilities

- Connect websites, WeCom, email, call transcripts and ticketing systems.
- Identify intent, retrieve knowledge, answer FAQs and create tickets.
- Escalate complex cases to human agents while preserving context and evidence.
- Track first-contact resolution, escalation, hot topics and knowledge gaps.

Ideal customers

Manufacturing / Software / Education / Government / Property / After-sales

Typical scenarios

Pre-sales Q&A, after-sales intake, ticket routing and status queries

Verifiable outcomes

• **Faster first response**

• **Less repetitive Q&A pressure**

• **Knowledge improvement loop**

Suggested acceptance metrics: First-response time, self-service resolution and escalation accuracy. Target values are confirmed against the customer baseline and pilot scope.

07 / PRODUCT

Sales & Customer Success Agent

Turn account research, follow-up, proposal preparation and renewal reminders into task flows.

Core capabilities

- Combine CRM, email, meeting minutes and collateral into a 360-degree account view.
- Generate visit preparation, proposal outlines, follow-up emails and next actions.
- Identify deal stage, risk signals, silent accounts and renewal milestones.
- Connect CRM, WeCom, calendars and quotation systems.

Typical scenarios

Lead research, opportunity follow-up, visit preparation and renewal alerts

Connect existing systems, databases and file repositories

Business outcomes

Less sales preparation

More consistent follow-up

Proactive account growth

Ideal customers

Software Services / Industrial Products / B2B Sales / Project Businesses

Suggested acceptance

Preparation time, follow-up completion and risk-alert adoption

08 / PRODUCT

Finance & FP&A Agent

Query operating data in natural language and return finance time to analysis and decisions.

01

Capability stack

Connect ERP, finance systems, business databases and Excel.; Generate operating briefs, budget variance, collections tracking and project margin analysis.

02

Workflow coordination

Validate metric definitions, data permissions and outliers.

03

Controls & audit

Keep data sources, calculation logic and export records with every conclusion.

● Shorter report preparation

● Consistent metric definitions

● Earlier anomaly discovery

Ideal customers Group Finance / FP&A / Budget Management / Project Finance

Suggested acceptance consistency, report preparation time and anomaly hit rate

Supply Chain & Procurement Agent

SUPPLY CHAIN & PROCUREMENT

Overview

Core capabilities

Typical scenarios

Acceptance metrics

Make the full procurement cycle more transparent, from demand and quotes to supplier collaboration.

Private-ready

Supply Chain & Procurement Agent

ONLINE

Capability modules

01

Parse purchase requests, material codes, inventory and historical prices.

02

Generate RFQs, comparison tables and supplier communication drafts.

03

Identify delivery, quality, price and compliance risks and suggest alternatives.

04

Connect ERP, SRM, inventory and contract systems with decision evidence.

Less manual comparison

More transparent decisions

Lower supply disruption risk

HR & Recruiting Agent

Turn job publishing, screening and onboarding coordination into a standard recruiting workflow.

The screenshot displays the HR & Recruiting Agent interface. At the top, it shows 'HR & Recruiting Agent' and 'ONLINE'. The main content area is titled '人力资源与招聘' (Human Resources and Recruitment) and includes a subtitle '智能体工作台 / 场景任务编排 / 可审计输出' (AI Agent Workbench / Scenario Task编排 / Audit-able Output). The interface is divided into three main modules: '01 / MODULE 开放岗位 16' (Open Positions 16), '02 / MODULE 待筛简历 83' (Resumes to be screened 83), and '03 / MODULE 待面试 21' (Candidates for interview 21). Below these modules is a '任务流程与执行轨迹' (Task flow and execution trace) section, which shows a sequence of steps: 'STEP 01 检索资料' (Retrieve information), 'STEP 02 识别任务' (Identify tasks), 'STEP 03 调用工具' (Call tools), and 'STEP 04 人工确认' (Manual confirmation). To the right of the workflow, there is a '实时状态' (Real-time status) section showing '匹配任务 31' (Matched tasks 31) and '关键指标 流程完成 88%' (Key indicators: Process completion 88%). At the bottom right, there is a '审计日志' (Audit log) section with entries for '09:41 任务已确认' (Task confirmed), '09:40 引用已绑定' (Reference bound), and '09:39 规则校验通过' (Rule check passed). A status bar at the bottom indicates '系统运行正常 · 数据隔离开启 · 人工复核可用' (System running normally · Data isolation enabled · Manual review available).

Ideal customers

HR / Recruiting / Organization Development / Large Employers

Suggested acceptance

Screening time, review consistency and process completion

From use case to outcome

Generate job descriptions, screening rules and structured interview questions from role profiles.

Parse resumes into structured records for review and candidate comparison.

Organize interview notes and candidate communication, then trigger onboarding checklists.

Analyze the recruiting funnel with strict personal-data access controls.

● Shorter initial screening

● More consistent processes

● Less repetitive communication

Practical Delivery method

Define the task and acceptance metrics first, then choose the model and architecture for measurable, scalable pilots.

Flexible deployment

Standard deliverables

Flexible Service Tiers

Estimated by scenario complexity, deployment, modules and integrations; ranges below support budget planning.

Essential

CNY 5k-50k

Best for

SMEs / R&D teams / department pilots

Typical scope

One scenario, one knowledge base, light workflow, cloud deployment

3-7 business days

Standard

Recommended

CNY 50k-200k

Best for

Mid-market / public sector / routine R&D

Typical scope

Multiple scenarios, RAG knowledge base, light automation, simple integrations

2-6 weeks

Enterprise

CNY 200k-800k

Best for

Large enterprises / dedicated R&D

Typical scope

Multiple systems and agents, permissions, dashboards and deep customization

1-3 months

Private enterprise

CNY 800k-3.5m+

Best for

Government / institutes / large groups

Typical scope

Private network, audit, multi-level permissions, high availability and dedicated operations

3-9 months

Pricing notes

Prices exclude third-party model tokens, GPU capacity, commercial software licenses, tax, travel and long-term on-site support. Private deployment, high availability, localized adaptation, compliance support and 24/7 operations are scoped separately.

Wuhan Yixingyun Technology Co., Ltd.

AI AGENT DEVELOPMENT & DELIVERY

Start with one real task

Move AI from answering to completing

We will map the workflow, confirm data boundaries, define pilot metrics and recommend the right model.

Please prepare

- 1 The specific task for the agent
- 2 Available documents, data and systems
- 3 Deployment, security and user requirements
- 4 Target timeline, budget and acceptance metrics
